

UPHOLSTERY!

Game Design Document — v7.0
Roblox • Craft Simulation • Multiplayer

What's New in v7.0

Three systems updated for v7.0. (1) FeedStitch renamed to Talkogram throughout. (2) Photo system references fully removed — follower formula is minigame result + job type bonuses only; photo quality bonus removed from Reputation table. (3) Workshop Stall system replaced with Client Location system — players teleport to the client's actual home or workspace. Location quality scales with job tier: Starter = studio apartment, Mid = regular house, Premium = luxury home, Prestige = supercar garage or yacht cabin. Each location type has 6 slots (matching the 6-player server cap). Wall, floor, fabric, and frame colors are randomized per job. The system is designed so new location types can be added per tier without changing any logic. Everything else carries forward from v6.0.

PART ONE — CONCEPT & DESIGN

1. Game Concept

Elevator Pitch

UPHOLSTERY! is a Roblox craft-simulation game where players run rival one-person upholstery businesses on a shared server. Claim jobs from a live board before other players take them, teleport to the client's actual home to fix their furniture with satisfying minigames, and auto-post your results to a shared social feed where your server mates can like and comment. Think PowerWash Simulator meets Work at a Pizza Place — with a social feed.

Multiplayer Model

UPHOLSTERY! uses a shared-world model. Players exist on the same server, browse the same job board, and see each other's Talkogram posts in real time. They never directly interfere with each other's active jobs. Competition is indirect — it comes from scarcity on the board, not conflict between players.

Interaction	Allowed?	Notes
Claiming a radiant job before others	YES	Core mechanic. First-come, first-served.
Entering another player's active job	NO	Player teleports to the client's assigned location slot (same server). Other players cannot enter.
Liking another player's Talkogram post	YES	Core social mechanic.
Commenting on another player's post	YES	80-char limit, filtered through Roblox chat filter.
Interfering with another player's minigame	NO	Never. This is a chill game.

Design Pillars

Pillar	What It Means
Satisfying Craft	Every minigame feels great to complete. Perfect results get juicy feedback — sounds, particles, a brief slow-mo.
Generous Economy	Free players reach every tier without spending Robux. Paid players get there faster and look better.
Social Energy	Talkogram makes the server feel like a community. Players should notice and react to each other naturally.
Real Relationships	Named clients and Story Jobs give the game heart beneath the competition.
Ship It	Two multiplayer systems for v1. More post-launch. Done beats perfect.

2. Core Gameplay Loop

The loop is unchanged from v4. The multiplayer layer adds one meaningful step — claiming before others do — and one new reward at the end: your post landing in a shared social feed where real players react to it.

Step	Action	What's New in Multiplayer
1	Browse live job board on phone	Board is shared. Jobs vanish in real time as others claim them.
2	Claim job (radiant) or accept (story)	Radiant jobs lock to you on claim. Story Jobs are always personal.
3	Teleport to client's location (tier-matched environment, same server)	Location quality matches job tier (Starter = studio apartment, Mid = regular house, Premium = luxury home, Prestige = supercar garage / yacht cabin). Colors randomized per job. No other player can enter.
4	Complete repair minigames	Unchanged. Result tier affects Talkogram post quality.
5	Auto-post created on job completion → posted to Talkogram	Post goes to the server feed. Other players can like and comment.
6	Collect pay, gain followers	Follower count updates. Server can see your post and react live.

PART TWO — MULTIPLAYER SYSTEMS

3. Live Job Board

Overview

The Live Job Board is the primary multiplayer touchpoint. All players on a server browse the same pool of radiant jobs simultaneously. Claiming a job removes it from everyone else's board instantly. The board is always replenishing, always moving, always slightly tense.

Board Behaviour

- The server maintains a pool of 8–12 visible jobs at all times.
- New jobs are generated on a rolling timer — roughly every 90–120 seconds, tunable in GameConfig.
- When a player claims a job, it disappears from all other players' boards immediately (server-authoritative, no client prediction).
- A brief tombstone entry replaces the claimed job for 3 seconds: "Taken by [PlayerName]" then fades out.

- Each player only sees jobs at or below their current follower tier. A Starter player never competes with a Prestige player for the same listing.

Tier Separation

Players only see jobs within their own follower tier. This prevents veterans from sweeping every high-value job and leaving newcomers with nothing. Tiers are defined in GameConfig and can be adjusted without touching logic.

Claim Racing & Edge Cases

Situation	How It's Handled
Two players tap claim simultaneously	Server receives both requests. First packet wins. Loser sees: "Taken by [PlayerName] — just missed it!"
Player opens a job card then hesitates	Job card stays open but the listing can still be claimed by others. A "Still available" / "Just taken" state updates live.
Server has fewer than 4 active players	Job pool reduces to 4–6 listings. Replenish timer speeds up slightly so the board never feels barren.
Player disconnects mid-job	Job is released back to the pool after a 60-second grace period (in case of accidental disconnect).

Premium Radiant Jobs

Premium Radiant Jobs are high-value entries generated by the same procedural system as standard radiant jobs, but drawn from an elevated pool. They appear less frequently, pay significantly more, and have stricter minigame requirements. They are not a separate system — they are an additional tier in the existing job generation pools.

Property	Standard Radiant	Premium Radiant
Frequency	Common — always several on the board	Rare — 1–2 on the board at any time
Visual distinction	Standard card style	Gold-bordered card, ★ Premium label
Pay multiplier	Base rate for tier	1.8×2.5× base rate
Follower bonus	Standard gain	+40% follower gain on completion
Minigame modifier	Standard precision window	Tighter precision window ("Fragile" modifier always applied)
Deadline	Standard or Urgent	Always Urgent — shorter deadline window
Competition	Claimed by first player to tap	Claimed by first player to tap —

		higher stakes
--	--	---------------

- Premium Radiant Jobs are generated from the same furniture and damage pools as standard jobs — no new content required.
- The “Premium” label is applied by the generator based on a roll weighted against current board composition. Roughly 1-in-6 generated jobs is Premium.
- On a busy server, Premium jobs are often claimed within seconds of appearing. This is intentional.

Hot Jobs (Special Premium Variant)

Once every 5–8 minutes, one Premium Radiant Job is designated a Hot Job. It appears with a flashing gold border and a 10-second countdown before it can be claimed. Every player on the server sees it simultaneously. The countdown creates a rare moment of synchronized server-wide tension. Hot Jobs pay 3× base rate and grant +75% follower bonus.

4. Talkogram — Social System

Overview

Talkogram is the in-game social platform. It provides a server-wide social feed where players can see each other’s completed job posts and interact with them via likes and comments. It is the social glue that makes the server feel like a community rather than a lobby of strangers.

Feed Structure

Tab	Contents
My Posts	The player’s own post history. Pre-set job image, follower gain per post, pinned best post at top.
Server Feed	All posts from players on the current server, newest first. Live — new posts appear without refreshing.

Post Anatomy

Every completed job generates one Talkogram post automatically. A post contains:

- Pre-set job image (one per furniture type, uploaded to Roblox Creator Hub)
- Furniture type and damage type label
- Result tier badge: Pass / Good / Perfect
- Follower gain from this post
- Client name (flavor only — no reputation data shown publicly)
- Like count and comment count

- Timestamp

Likes

Any player on the server can like any post in the Server Feed. Liking is a single tap — one like per player per post, toggleable. The like count updates in real time for all players viewing that post.

- Receiving likes does not grant extra followers. Likes are purely social — they are acknowledgement, not currency.
- A post with 5+ likes gets a small “Popular” tag added to its card in the Server Feed.
- The player who posted receives a subtle phone notification for each like: “[PlayerName] liked your chair post.”

Why No Follower Reward for Likes?

If likes granted followers, the system becomes gameable — players spam-like friends to boost each other. Keeping likes as pure social acknowledgement preserves their meaning. The follower system remains solely skill-based (minigame result + job type), which is fairer and cleaner.

Comments

Any player on the server can comment on any post in the Server Feed. Comments are short and filtered.

Comment Rule	Detail
Character limit	80 characters maximum. Short enough to manage, long enough to be expressive.
Content filtering	All comments pass through Roblox's built-in chat filter before posting. No exceptions.
Posts per player	Maximum 3 comments per player per post. Prevents spam.
Comment notifications	Post author gets a phone notification: “[PlayerName] commented on your sofa post.”
Deletion	Players can delete their own comments. Moderators can delete any comment.
Replies	No threaded replies in v1. Flat comment list only. Replies are a post-launch feature.

Post Visibility & Privacy

- All posts are visible to all players on the same server by default.

- Players cannot hide individual posts, but they can choose not to post (by skipping the post step — this forfeits the follower gain for that job).
- Posts do not persist between server sessions. When a server closes, its feed clears. Global follower counts persist via DataStore.

The “Best Post” of the Session

At the end of each server session (or every 2 real-time hours, whichever comes first), Talkogram automatically highlights the post with the highest combined quality score from that session. It gets pinned to the top of the Server Feed with a “Best This Session” banner. The player who posted it gets a small one-time follower bonus. No voting — purely algorithmic.

Moderation Note

Because comments are user-generated content, the Roblox chat filter handles the heavy lifting. Additionally, the 80-character limit and 3-comment cap significantly reduce the surface area for abuse. These constraints are features, not limitations.

PART THREE — CORE GAME SYSTEMS

5. Job System

Radiant vs. Story Jobs

Property	Radiant Jobs	Story Jobs
Generation	Procedurally assembled from pools	Hand-authored, tied to named clients
Availability	Shared. Any player on the server can claim	Personal. Always available to you only
Volume	~80% of board listings	~20% of board listings
Multiplayer	YES — first-come, first-served	NO — always waiting for you
Premium tier	YES — 1-in-6 chance of Premium generation	NO — Story Jobs have fixed rewards

Radiant Generation Pools

Pool 1 — Furniture Types

- Dining chair, armchair, office chair, bar stool, bench
- Two-seater sofa, three-seater sofa, sectional corner piece
- Car seat (driver), car seat (passenger), motorcycle seat
- Ottoman, footstool, window seat cushion

Pool 2 — Damage Types

- Torn seam → Seam Stitching
- Loose or missing staples → Staple Gunning
- Foam collapse → Foam Padding
- Tack damage → Tack Removal
- Combination damage (two types) — mid-tier and above only

Pool 3 — Client Flavor

- No story: “Need this done fast, here’s my address.”
- Light flavor: “Kids destroyed this. I’m not proud.”
- Rare emotional hook: “This was my late mother’s. Please be gentle.”

Pool 4 — Modifiers

- Urgent — higher pay, shorter deadline
- Fragile material — tighter precision window in minigame (always applied to Premium)
- Premium — gold-bordered card, 1.8–2.5× pay, tight deadline, +40% follower bonus
- Hot Job — special Premium variant. Countdown before claim opens. 3× pay, +75% follower bonus.

Job Tiers

Tier	Followers Required	Furniture Types	Minigames	Pay Range
Starter	0–500	Chairs, cushions, car seats	1	50–150 coins
Mid	500–2,000	Sofas, office chairs, motorcycle seats	2	200–500 coins
Premium	2,000–10,000	Antique furniture, luxury car interiors	2–3	600–1,200 coins
Prestige	10,000+	Heirlooms, yacht cabins, theater seating	4–6	1,500–3,000 coins

Client Location System

When a player accepts a job, they are teleported to the client's actual home or workspace. The quality of that environment scales with job tier. Each location type has 6 numbered slots (matching the 6-player server cap), so every active player on the server is always in a different slot. Wall, floor, fabric, and frame colors are randomized per job assignment. The system is structured so additional location types can be added to any tier in GameConfig without changing any LocationManager logic.

Job Tier	Location Type (v1)	Slots
Starter	Studio Apartment	6 (matches server cap)
Mid	Regular House	6
Premium	Luxury Home	6
Prestige	Supercar Garage / Yacht Cabin	6

Story Jobs

Story Job	Client	Unlock	Summary
The First Favor	Raka	Default — session 1	His moped seat. Teaches the game. Ends with him posting about your work on his own account.
The Office Chair	Pak Budi	3 stars reputation	His 20-year-old chair. He tells you stories of his career while you work.
The Feature Post	Kak Sari	2,000 followers	She wants a velvet loveseat restored to showroom condition — it's going in the background of her next big content shoot. The challenge: a combination damage job (torn seam + foam collapse) at Premium difficulty, both minigames must score Good or Perfect or she rejects the post. First job to introduce a minimum result threshold.
The Deadline	Mr. Tan	4 stars reputation	His car seat before a rally. First job with a ticking clock UI element.
The Heirloom	Ibu Lastri	5 stars reputation	Her grandmother's armchair. Most emotional job in the game. Massive follower spike on completion.

6. Reputation System

Reputation is a personal, per-client relationship score (0–5 stars). It is not visible to other players and is not a competitive metric. It governs access to Story Jobs and exclusive client content.

Action	Change
Complete on time	+1.0 stars
Complete late	+0.3 stars
Abandon job	−1.5 stars
Perfect minigame	+0.25 stars
Referral completed	+0.75 stars (with referring client)

Reputation	Effect
0–1 star	Client may refuse work. Pay −30%. Story Jobs locked.
2–3 stars	Standard jobs and pay. Story Jobs begin unlocking at 3 stars.
4–5 stars	Exclusive Story Jobs unlock. Referrals activate.

7. Minigames

Four minigames ship in v1. All share a common Pass / Good / Perfect result tier. All are self-contained ModuleScripts with a shared interface for clean chaining in Prestige jobs.

Minigame	Mechanic	Mobile Support	V1 or Post-Launch
Tack Removal	Click/tap tacks off a fabric panel. Tutorial difficulty.	Tap	V1
Seam Stitching	Follow a dotted path with a needle cursor. Deviate = break.	Touch drag	V1
Staple Gunning	Tap when a moving bar hits the target zone. Rhythm-based.	Tap	V1
Foam Padding	Drag and rotate foam pieces onto a frame silhouette. Jigsaw.	Touch drag	V1
Leather Cleaning	Sweep a cloth over stained leather. Limited fluid. Methodical.	Touch drag	Update 1
Fabric Cutting	Follow a pattern outline with scissors. Most precise minigame.	Touch drag	Update 1

8. Follower System

Followers are the primary progression metric. They unlock job tiers, trigger House Prestige upgrades, and are the score that the multiplayer layer implicitly competes around.

Follower Formula

Factor	How Scored	Follower Bonus
Minigame result	Pass / Good / Perfect	+0 / +10 / +25%
Premium job bonus	Automatically applied to Premium Radiant posts	+40%
Hot Job bonus	Automatically applied to Hot Job posts	+75%
Story Job bonus	Automatically applied to all Story Job posts	+20%

Follower Milestones

Followers	Milestone
500	Mid-tier jobs unlock on the board
2,000	Premium-tier jobs unlock. House upgrades to Tier 2 (Corner House). Second-hand moped prop.
10,000	Prestige jobs unlock. House upgrades to Tier 3 (Workshop Villa). New moped prop.
50,000	House upgrades to Tier 4 (Skyline Penthouse). Pickup truck prop.

9. House Prestige System

As follower counts grow, players move into progressively larger homes. Purely cosmetic. Zero gameplay advantage. Each tier is a visible, brag-worthy milestone.

Tier	Followers	House	Description	Vehicle Prop
1	0 (Default)	Starter Flat	Small apartment above a shop. Basic workbench, small balcony.	Rusty Moped

2	2,000	Corner House	Two-storey terrace. Proper workroom, small garden, photo wall.	Second-Hand Moped
3	10,000	Workshop Villa	Spacious villa with a dedicated upholstery workshop and driveway.	Brand New Moped
4	50,000	Skyline Penthouse	High-rise penthouse. Open-plan, city view, trophy room for certificates.	Pickup Truck

Vehicle props are cosmetic in v1. When the driving update ships, they unlock automatically for players who already own them.

Decoration Category	Examples	Source
Photo Wall	Frame styles, mat colors, caption fonts	Milestones + Robux packs
Furniture	Desk style, chair color, bookshelf design	Robux cosmetic packs
Plants & Decor	Plants, rugs, lamps, wall art	Milestones + Robux packs
Trophy Display	Prestige certificates, follower plaques	Earned in-game only, never purchasable

10. Client Roster

Client	Personality	Dialogue Style	5-Star Perk
Raka	Neighbor. Warm, casual, encouraging. First contact.	Emoji-heavy, feels like a real friend	1 referral per week
Pak Budi	Retired civil servant. Formal, kind, slow to reply.	Full sentences, occasional dry humor	Exclusive Story Job: his career chair
Kak Sari	Young freelancer. Posts about your work on her account.	Short, visual, uses slang	Double follower gain on her jobs
Mr. Tan	Impatient car enthusiast. Demanding, pays the best.	Terse, urgent, lots of exclamation marks	Prestige car interior Story Jobs

Ibu Lastri	Grandmother. Warm, tells long stories. Low pay.	Long messages, emotional, calls you 'dear'	Heirloom Prestige storyline
-------------------	---	--	-----------------------------

11. Economy

Daily Overhead

All running costs are a single Daily Overhead number shown as a soft goal on the phone: “Cover today’s expenses.” Two average jobs covers it. Keeps the hustle motivation without tracking multiple cost meters.

Coins

Earned from jobs. Spent on tools and base decoration. Cannot be purchased directly with Robux — gamepasses multiply earnings instead, protecting the pay-to-win perception.

Tools (No Inventory System in V1)

No tool inventory or slot system until the driving update. If a player owns a tool, it is available on all jobs. Tool slots return in Update 2 with open-world driving.

Tool	Unlock	Effect
Basic Staple Gun	Default	Standard precision in Staple Gunning
Curved Needle	500 coins	Wider tolerance in Seam Stitching
Foam Press Kit	800 coins	Wider tolerance in Foam Padding
Professional Shears	1,200 coins	Required for Fabric Cutting (Update 1)
Premium Toolkit	Entrepreneur Pass	All tools at Professional quality, no degradation

12. Monetization

Earn from speed and status. Free players reach every tier. Paid players get there faster and their house looks better.

Gamepasses

Pass	Effect	Price (R'000)
Entrepreneur Pass	2× coin earnings. Tools never degrade.	299
Influencer Pass	2× follower gain on all posts.	199
VIP Client Pass	Unlocks a permanent exclusive bonus client.	149
Vehicle Bundle	All three moped props visible from day one.	249
Decorator's Pass	Full base decoration catalog unlocked immediately.	199

Developer Products

Product	Effect	Price (R'000)
Booster Post	3× follower gain on next post.	25
Rush Delivery	Skip tool delivery timer.	15
Coin Pack S	Small coin injection.	49
Coin Pack M	Medium coin injection.	99
Coin Pack L	Large coin injection.	199

Cosmetics

Category	Examples
Tool Skins	Gold staple gun, vintage scissors, neon pliers
Phone Cases	Floral, marble, branded patterns for the in-game phone
Base Decoration Packs	Themed packs per house tier (e.g. Minimal Studio, Boho Workshop)
Character Uniforms	Work shirts, caps, gloves, aprons for the avatar

✗ What We Are Not Doing

No loot crates. No randomized paid rewards. No stat advantages from paid tools. Trophy display items for Prestige jobs are earned in-game only and can never be purchased.

13. Onboarding

The game opens with a knock at the door. It's Raka. His moped seat is splitting. He walks the player through their first job via text chat — no forced tutorial panels, no pop-up boxes. By the end of session one: 2–3 jobs completed, first 50 followers gained, one tool purchased, first Talkogram post liked by a server-mate.

14. Development Roadmap

V1 Launch — 10 Week Plan

Week	Milestone	Deliverables
1–2	Foundation	DataStore, RemoteEvent pipeline, GameConfig, phone UI shell, job data schema
3–4	Core Loop	Job board (single-player), radiant generator (all 4 pools), accept/complete/pay, teleport
5–6	Minigames	All 4 v1 minigames with Pass/Good/Perfect tiers and chaining system
7	Progression	Reputation math, follower formula (minigame result + job type bonuses), Talkogram personal feed
8	Multiplayer	Live Job Board (shared, real-time), Premium Radiant Jobs, Hot Jobs, Talkogram Server Feed, likes, comments
9	House & Clients	5 NPC clients + text dialogue, 3 Story Jobs, House Prestige tiers 1–4, vehicle props
10	Economy & Launch	Monetization passes, tool system, all GameConfig balancing, bug fixes, launch

Post-Launch Roadmap

- Update 1 (Month 2): Leather Cleaning + Fabric Cutting minigames, Kak Sari and Ibu Lastri Story Jobs, 2 referral clients
- Update 2 (Month 3): Open-world driving, fuel system, tool inventory slots, vehicle mechanics unlock
- Update 3 (Month 4): Base upgrade system (workbench, espresso machine, storage expansion)
- Update 4 (Month 5): Co-op mode — 2-player shared jobs, split pay, co-op Story Jobs
- Update 5 (Month 6): Seasonal leaderboards, rival NPC upholsterer, seasonal cosmetic drops

15. Technical Design Notes

Constraint	Reason
All game state server-side only	Prevents exploits. Clients send inputs, receive state via RemoteEvents.
Live Job Board via RemoteEvent broadcast	On claim, server fires a RemoveJob RemoteEvent to all clients immediately.
Talkogram comments via DataStore	Comments stored per-server session only (not persisted globally). Clears on server reset.
Comments pass through Roblox chat filter	Filter must be called server-side before storing. Client-side filtering alone is insufficient.
Premium radiant generation in GameConfig	Premium roll rate (default 1-in-6) and pay multiplier range all tunable without touching logic.
All balance numbers in GameConfig only	Follower gain, pay rates, board size, replenish timer — all in one file.
DataStore: one table per player	Load once on join, save every 60s + on leave. Avoids rate limits.
Minigame shared interface	Start() / GetResult() / Cleanup(). Prestige job chaining is free.
House tiers as model swap	Load only the active house model. Old model unloaded on tier transition.
Client Location system: LocationManager.server.luau	ClientLocations folder in Workspace, organised by location type (StudioApartment, RegularHouse, LuxuryHome, SupercarGarage, YachtCabin). Each type contains 6 numbered slot Models. LocationManager.server.luau tracks a free/occupied pool per location type, assigns a slot on AcceptJob, clones the furniture model with randomized wall/floor/fabric/frame colors, and fires TeleportToLocation/TeleportToHub RemoteEvents. New location types are added to GameConfig.Locations only — no logic changes required.
Post images: pre-uploaded imageId per furniture type	No runtime screenshot API exists in Roblox. One image uploaded per furniture type to Creator Hub. imageId stored in job table; displayed via "rbxassetid://" .. imageId in TalkogramFeed.

UPHOLSTERY! — v7.0

Live Job Board • Talkogram Social • Premium Radiant Jobs • Ship First
